Basic Introduction how the game is supposed to work.

Title: Human player wins

Start: A Human plays against the computer in a Tic-Tac-Toe Game with a field, which contains 3 x 3 Blocks. They play until all 9 Blocks are marked or one of the players has won. It´s the 5th turn and the human can choose a block on the field (which has not been marked yet). Currently the human has choosen 2 blocks (marked with a cross) on the 1st row and the computer has 2 blocks (marked as circle) on the 2nd row. Nobody has won yet.

Action: The human chooses and marks the 3rd Block in the 1st row with a cross.

End: The Human has won with 3 marked blocks in a row. The computer has lost because it only has 2 marked blocks on the field.

Title: Nobody wins

Start: A Human plays against the computer in a Tic-Tac-Toe Game with a field, which contains 4 x 4 Blocks. They play until all 16 Blocks are marked or one of the players has won. It´s the 16th turn and the computer can choose a block on the field (which has not been marked yet). Untfortunatley there is only one field left, because the Human has already marked 8 blocks (with a cross) and the computer has marked 7 blocks (with a circle). Nobody has won yet.

Action: The computer chooses the last block and marks it with a circle.

End: The game has ended with a draw, because all blocks got marked without any player being the winner.
